auth^X

Managed Service Provider Program Overview.

Log in anytime, anywhere with AuthX - Tap & Go Authentication.

AuthX Identity and access management solutions help organizations protect their customers from data breaches and provide an end-to-end authentication platform through cloud applications, mobile devices, and workstations. AuthX serves as the foundation for the digital identity ecosystem and workforce security system.

AuthX enables multi-factor authentication and offers a wide range of access options, including RFID Tap & Go password-less log-in, biometric authentication, and more. It can integrate with external systems to ensure seamless workflows across different use cases.

Zero Trust security with AuthX

AuthX, zero trust architecture, provides a secure authentication layer to online applications, along with multi-factor authentication. With today's workforce increasingly migrating to remote locations, AuthX Zero trust policy establishes trust in users and devices and protects them via cloud and local servers with web applications and through authentication.

Integrations

AuthX security is extended to any application or platform by leveraging our powerful APIs.

Easy to Set-up

Users register once & use their identity across the business and personal continuum.

Advanced Reporting

AuthX generates authentication reports, activity on externally linked applications, & much more.
